

Installation Instructions

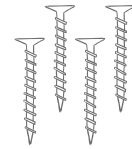

What You Need:

Surge Protector Device

Flush Mount Cover

Screws (4 ct.)

Phillips Head
Screwdriver

To Assemble

1. Remove the four screws from surge protector device.
2. Place flush mount cover over surge protector device, lining up the screw holes.
3. Check to make sure the lid fits snugly to the base before tightening screws.
4. Using the four screws provided with the surge protector, secure the flush mount cover onto the surge protector device with a screwdriver (not a power drill).
5. Check to make sure the two pieces have been connected completely and there is no gap between the flush mount cover and surge protector device.
